EDUCATION

University of Southern California, Viterbi School of Engineering Bachelor of Science, Computer Science and Business Administration Cumulative GPA: 3.92/4.00, Dean's List <i>Relevant Courses:</i> Intro to Computer Science (C++), Discrete Math	Los Angeles, CA <i>Expected May 2029</i>
The Hotchkiss School High School Diploma	Lakeville, CT <i>May 2025</i>

RELEVANT SKILLS

Programming Languages: C++, Java, Python, TypeScript, SQL (SQLite), JavaScript
Frameworks and Tools: Git, React, TensorFlow.js, Docker, Node.js, Visual Studio Code

WORK EXPERIENCE

Software Developer <i>Biskét</i>	New York, NY <i>May 2026 – Present</i>
Conducting quality testing, doing market research, and making product decisions for an early-stage startup creating a POS system for restaurants in areas with unreliable internet connectivity and older financial systems.	
Technical Assistant <i>Trojan Event Services</i>	Los Angeles, CA <i>September 2025 – Present</i>
- Set up and operate audio, lighting, and stage equipment for performances, lectures, and other campus events. - Collaborate with managers and production staff to maintain smooth product workflow and meet client expectations.	

PROJECTS

FormMax <i>React, TypeScript, TensorFlow.js, Tailwind CSS</i>
- Developed web app that uses TensorFlow.js pose estimation and a live webcam feed to detect and flag bad form during weightlifting exercises in real time. - Implemented squat analysis logic using MoveNet skeletal keypoints, achieving 92% rep-counting accuracy across varied lighting and body types. - Detected common form errors including insufficient depth, knee valgus, excessive forward lean, and incomplete lockout with instant visual feedback.
TrojanChat <i>React, Node.js</i>
- Built a chat application featuring React 19 frontend and Node.js backend, delivering multi-channel messaging experience across all devices. - Implemented RESTful API, enabling persistent message storage and efficient channel management. - Built UI with Tailwind CSS 4 for responsive design, smooth animations, and optimized rendering performance.
Unicorn <i>React, SQLite, Node.js</i>
- Developed a full-stack prediction market using React 19 and Node.js for trading on startup events like IPOs. - Implemented LMSR market-making algorithms to automate dynamic share pricing and provide liquidity. - Engineered a trading system using SQLite transactions to guarantee atomic execution and 100% ledger accuracy.

ACTIVITIES AND LEADERSHIP

National Society of Black Engineers <i>Pre-Collegiate Initiative Chairperson</i>	<i>September 2025 – Present</i>
- Lead sub-committee to plan and coordinate STEM and college readiness programming for K-12 students to demonstrate the opportunity of a 4-year college education. - Organized virtual professional and college admissions prep programming by collaborating with professionals and college students.	
Product@SC <i>Catalyst Cohort Member</i>	<i>September 2025 - December 2025</i>
- Selected to undergo 12-week training on Product Management principles, recruiting, and frameworks. - Participated in Disney Case Competition to drive Gen Alpha's engagement with Disney's Classic film library. - Worked in a team of 5 to present GTM strategy, KPIs, wireframes, and competitive analysis for a new short-form content feature on Disney+.
